Lee Storrow was a proud regular platelet donor ... blood. “There are real risks that are associated with not identity, but certain conduct,” said Scott Schoettes, the former HIV project ...

Individuals who donate their blood provide a unique and precious gift in an act of human solidarity. In order to donate blood, prospective donors should be in good health and free from any infections that can be transmitted through transfusion. Most blood donors perceive themselves to be healthy, but some are unsuitable to donate blood due to the potential risk of compromising or worsening their own health or the risk of transmission of infections to patients. Blood transfusion services (BTS) have a duty of care towards blood donors as well as to the recipients of transfusion. This duty of care extends to prospective donors who are deferred from donation—whether on a temporary or permanent basis—as well as those who donate blood and are subsequently found to have unusual or abnormal test results. BTS have a responsibility to confirm test results and provide information, counseling and support to enable these individuals to understand and respond to unexpected information about their health or risk status. Counseling is part of the spectrum of care that a BTS should be able to provide to blood donors—including referral to medical practitioners or specialist clinical services. Pre-donation counseling was recognized as one element of the strategy to reduce and, if possible, prevent the donation of blood by individuals who might be at risk for HIV and other TTI including hepatitis B and C viruses as well as to inform the donor of the donation process and testing of blood for HIV. Post-donation counseling was acknowledged to be a necessary element of donor management as an adjunct to informing donors of unusual or abnormal test results. Blood donor counseling by trained specialist staff is now considered to be a key component of the blood system in most countries with a well-developed blood transfusion service. It may be required at a number of stages in the blood donation process or following blood screening and should be available at any point at which the BTS has an interface with donors. In many countries, however, blood donor counseling is not yet available in a structured way. Blood Donor Counselling: Implementation Guidelines has therefore been developed to provide guidance to blood transfusion services that have not yet established donor counseling programs.

Lean Six Sigma is a proven worldwide approach for process improvement that consists of tools from two very different methodologies, Lean and Six Sigma. Developed over decades by Toyota, Lean contains a variety of tools tailored to reduce waste in processes, whereas Six Sigma is a result of Motorola seeking to reduce variation in processes that curb production. The combined approaches have helped companies save billions of dollars while also boosting revenue. In this guide to Lean Six Sigma success, the author explains the methodology using complete and detailed project documentation. The main case study describes a finance company that faces client attrition and a decrease in revenue and market share due to process problems. Throughout the book, the project work and the application of typical Lean Six Sigma tools are explained using the case as a guide. By using a Lean Six Sigma approach, the company ultimately increased client satisfaction and loyalty and achieved a lasting improvement in business results. Combine the power of two rigorous management practices and boost your bottom line with the lessons in Lean Six Sigma Nuggets.

With this symposium the Red Cross Blood Bank Groningen-Drenthe affirms its well known reputation as an organizer of symposia of high standard and quality. Several important aspects of bloodbanking have been discussed in the past. The Blood Bank here is a specialist in its own field. Administrative processes in respect of the donor, information processes, the preparation of the blood and the laboratory process are automatized. New developments in these fields are underway that you will certainly identify and investigate. I do hope that you will come to conclusions from which we can learn and get better results. As general manager of the Development and Investments Company for the Northern Netherlands - NOM - for several reasons I am very much interested in the outcome of this symposium. In the first place I am proud that the Red Cross Blood Bank Groningen Drenthe is doing its utmost to be excellent in regard of research, education and bloodprocessing. In being so, the Blood Bank can produce spinn-offs for healthservices and the related industry.

Design Guidelines for Blood Centres will serve as a tool for authorities responsible for developing building centers to house blood transfusion services. These guidelines were prepared to assist countries in developing appropriate, purpose-built facilities for blood services. They may be used to guide the design of new buildings, to direct the renovation of existing facilities or even to improve work patterns by considering the layout in established facilities.

The bestselling "bible" of project management In today's time-crunched, cost-conscious global business environment, tight project deadlines and stringent expectations are the norm. Now with 25 percent new and updated content, Project Management For Dummies introduces you to the principles of successful project management and shows you how to motivate any team to gain maximum productivity.
