Burnishing of the near surface by the cutting tool and the resulting
amorphous-like damage layer was implicated as the cause. Yuan et al.
investigated the effect of crystallographic orientation on the cutting
forces in the diamond cutting of single crystal Cu and Al with a 5 μm
depth of cut. They found that crystallographic direction had a
significant effect on the resulting cutting forces, and that the
measured variation in cutting force compared well with analytical
results from a ...

This paper reports a miniaturised triaxial force sensorized cutting tool for minimally invasive robotic surgery. This device exploits a silicon based MEMS triaxial force sensor that acts as the core component of the system. The outer diameter of the proposed device is less than 3 mm, thus enabling the insertion through a 9 French catheter guide.
