Poverty has become a challenge for European societies. Employment is often considered to be a key route out of poverty, whereas unemployment is seen as a major cause of poverty and social exclusion. Employment does not prevent poverty among the working population, however, and low-income employment has become an important policy issue in Europe. Empowerment of those experiencing extreme poverty in their daily life is one strategy to combat this phenomenon. Empowerment provides individuals living in poverty with the tools which enhance their ability to deal with the situation. This publication is designed to assist policy makers and service providers at national and local levels to develop effective strategies to improve the situation of low-income workers and to empower people experiencing extreme poverty in Europe. It is an important contribution To The implementation of the Council of Europe's Revised Social Cohesion Strategy, As well as To The European Year for Combating Poverty and Social Exclusion, launched by the European Union in 2010.

Worldwide child and youth poverty remain the biggest barrier to achieving a better life in adulthood. Progress in lifting children out of poverty in the last decades has been slow and limited in the developing world, while the recent global economic crisis has exacerbated child poverty, youth unemployment, and social exclusion in many developed countries. This book critically examines the long-term consequences of growing up poor, the close linkages between deprivation and human rights violations in childhood and adolescence, and their effects on labor market entry and future career in a number of developing and developed countries. Drawing on multiple disciplinary perspectives, it makes a forceful case for the eradication of child poverty to take center stage in the Sustainable Development Goals.

This Selected Issues paper assesses the marginal impact of promoting inclusive growth in Malta. The paper uses a multi-country simulation model, the IMF's Flexible System of Global Models calibrated for Malta, is used to analyze the macroeconomic impacts of ongoing and potential future reforms. Three different policies are analyzed, namely: increasing childcare and after care benefits; extending working lives; and upskilling the labor force. The model shows that the reduction of absolute poverty has been accompanied by rising inequality. The simulation evaluates the macroeconomic impact of introducing free childcare, which is the actual government policy since 2015. Simulations show that policies that are primarily aimed at improving social inclusion also end up boosting potential output, thereby mitigating the fiscal cost of such policies in the long term. Recent declines in poverty rate can partly be ascribed to the cycle, however, recent structural reforms likely have had a significant impact on growth.
