This edited book is a compilation of research by the members of the Out-of-Field Teaching Across Specialisations (OOF-TAS) Collective, and is the second book by the Collective. It extends from the work begun in the 2019 book, *Examining the Phenomenon of "Teaching Out-of-Field"* by showcasing the broad range of research agendas and findings relating to this phenomenon internationally. This book provides research and commentary relating to the out-of-field teaching phenomenon in primary, secondary and tertiary education, and across different subjects. It provides snapshots of the effects, causes,

measurement, and other characteristics of out-of-field teaching in and across contexts, including states and countries, school types and school levels, subjects and specializations. The different chapters provide commentary at different units of analysis, and focus on: the effects of out-of-field teaching for teachers and their students; the school contexts/cultures that do or do not support them; the leadership practices that assign the teachers to out-of-field subjects; and the systems that create/perpetuate the need for out-of-field teaching assignments. Over the past two decades, the banking industry has expanded and consolidated at a stunningly unprecedented speed. In this time banks have also moved from focusing purely on commercial banking activities to being heavily involved in market-based and transaction-oriented wholesale and investment banking activities. By carrying out an all-encompassing set of activities, banks have become large, complex, interconnected, and inclined to levels of risk-taking not previously seen. With the onset of the 2008 global financial crisis it became apparent that there was an issue of institutions being too big to fail. This book analyses the too-big-to-fail problem of banks in the EU. It approaches the topic from an

interdisciplinary perspective using behavioural finance as a tool to examine the occurrence of the global financial crisis and the emergence of the structural problem in large banking institutions. The book draws a comparison between the EU, the US and the UK and the relevant rules to assess the effectiveness of various approaches to regulation in a global context. Chen Chen Hu goes on to use behavioural analyses to provide new insights in evaluating the current structural reform rules in the EU Proposal on Bank Structural Regulation and the newly adopted bank recovery and resolution regime in the EU Bank Recovery and Resolution Directive and the Single Resolution Mechanism (SRM) in the Single

This volume contains the proceedings of the Seventh Conference on Function Spaces, which was held from May 20-24, 2014 at Southern Illinois University at Edwardsville. The papers cover a broad range of topics, including spaces and algebras of analytic functions of one and of many variables (and operators on such spaces), spaces of integrable functions, spaces of Banach-valued functions, isometries of function spaces, geometry of Banach spaces, and other related subjects.

aspects of everyday life-the discipline has underpinned such beneficial modern capabilities as Internet search, medical imaging, computer animation, numerical weather predictions, and all types of digital communications. The Mathematical Sciences in 2025 examines the current state of the mathematical sciences and explores the changes needed for the discipline to be in a strong position and able to maximize its contribution to the nation in 2025. It finds the vitality of the discipline excellent and that it contributes in expanding ways to most areas of science and engineering, as well as to the nation as a whole, and recommends that training for future generations of mathematical scientists should

be re-assessed in light of the increasingly cross-disciplinary nature of the mathematical sciences. In addition, because of the valuable interplay between ideas and people from all parts of the mathematical sciences, the report emphasizes that universities and the government need to continue to invest in the full spectrum of the mathematical sciences in order for the whole enterprise to continue to flourish long-term.

Wartime is not just about military success. Economists at War tells a different story - about a group of remarkable economists who used their skills

to help their countries fight their battles during the Chinese-Japanese War, Second World War, and the Cold War. 1935-55 was a time of conflict, confrontation, and destruction. It was also a time when the skills of economists were called upon to finance the military, to identify economic vulnerabilities, and to help reconstruction. Economists at War: How a Handful of Economists Helped Win and Lose the World Wars focuses on the achievements of seven finance ministers, advisors, and central bankers from Japan, China, Germany, the UK, the USSR, and the US. It is a story of good and bad economic thinking, good and bad policy, and good and bad moral positions. The economists suffered threats,

imprisonment, trial, and assassination. They all believed in the power of economics to make a difference, and their contributions had a significant impact on political outcomes and military ends. Economists at War shows the history of this turbulent period through a unique lens. It details the tension between civilian resources and military requirements; the desperate attempts to control economies wracked with inflation, depression, political argument, and fighting; and the clever schemes used to evade sanctions, develop barter trade, and use economic espionage. Politicians and generals cannot win wars if they do not have the resources. This book tells the human stories behind the economics of wartime.

This completely new title is written to specifically cover the new IB Diploma Mathematical Studies syllabus. The significance of mathematics for practical applications is a prominent theme throughout this coursebook, supported with Theory of Knowledge, internationalism and application links to encourage an appreciation of the broader contexts of mathematics. Mathematical modelling is also a key feature. GDC tips are integrated throughout, with a dedicated GDC chapter for those needing more support. Exam hints and IB exam-style questions are provided within each chapter; sample exam papers (online) can be tackled

education. STEM Integration in K-12 Education proposes a framework to provide a common perspective and vocabulary for researchers, practitioners, and others to identify, discuss, and investigate specific integrated STEM initiatives within the K-12 education system of the United States. STEM Integration in K-12 Education makes recommendations for designers of integrated STEM experiences, assessment developers, and researchers to design and document effective integrated STEM education. This report will help to further their work and improve the chances that some forms of integrated STEM education will make a positive difference in student learning and interest and other
