This is the second of a three-volume work constituting a comprehensive, scholarly edition of the correspondence of the English economist, Alfred Marshall (1842-1924), one of the leading figures in the development of economics and the founder of the Cambridge School of Economics. The edition fills a long-standing gap in the history of economic thought with hitherto unpublished material. Students will find it a basic resource for understanding the development of economics and other social sciences in the period since 1870. In particular, it provides much new information about Marshall's views on economic, social and political issues, his struggles to promote the teaching of economics at the University of Cambridge, and his relations with colleagues in Cambridge and elsewhere. Marshall's letters are notable for their frankness and spontaneity.

There is a vast economic literature studying the effects of climate change on long-run growth, migration, urbanization, and human capital, among several other outcomes. The paper is structured as follows: Section 3.2 dives into some of the physical characteristics of Lake Chad and its water sources. Section 3.3 introduces our novel data. Section 3.4 presents the hypothesis and empirical strategy behind our analysis. Sections 3.5, 3.6 and 3.7 present results on total population, cities and roads, respectively. Finally, section 3.8 concludes.

This study, first published in 1983, is primarily concerned with what the British economists over the period 1860 to 1914 wrote on a range of economic and non-economic aspects of the British Empire, and the reasons for their conclusions. The attempt is also made to correct the view that mainstream British economists after 1860 were antithetical to the concept of empire. This title will be of interest to students of economic thought.

The focus of Joseph Stiglitz's work in economics throughout his long and distinguished career has been on the real world, with all of its imperfections.

Historians have often speculated on the alternative paths the United States might have taken during the Great Depression: What if Franklin D. Roosevelt had been killed by one of Giuseppe Zangara's bullets in Miami on February 17, 1933? Would there have been a New Deal under an administration led by Herbert Hoover had he been reelected in 1932? To what degree were Roosevelt's own ideas and inclinations, as opposed to those of his contemporaries, essential to the formulation of New Deal policies? In *Roosevelt, the Great Depression, and the Economics of Recovery*, the eminent historian Elliot A. Rosen examines these and other questions, exploring the causes of the Great Depression and America's recovery from it in relation to the policies and policy alternatives that were in play during the New Deal era. Evaluating policies in economic terms, and disentangling economic claims from political ideology, Rosen argues that while planning efforts and full-employment policies were essential for coping with the emergency of the depression, from an economic standpoint it is in fact fortunate that they did not become permanent elements of our political economy. By insisting that the economic bases of proposals be accurately represented in debating their merits, Rosen reveals that the productivity gains, which accelerated in the years following the 1929 stock market crash, were more responsible for long-term economic recovery than were governmental policies. Based on broad and extensive archival research, *Roosevelt, the Great Depression, and the Economics of Recovery* is at once an erudite and authoritative history of New Deal economic policy and timely background reading for current debates on domestic and global economic policy.
