Expanded and updated to reflect the most recent changes in the viva examination

Hardcore Pharmacology focuses on the essentials of pharmacology, as an ultra-high yield Step 1 review and an ideal course supplement. Figures and images help students visualize key concepts, and the concise, outline format allows rapid access to vital information. Critical "hardcore" facts are highlighted in the text, emphasizing the most heavily tested information for review.

An essential, up-to-date and evidence-based revision guide designed in the style of the Final FFICM structured oral examination.

This updated volume provides detailed summaries of relevant science topics for anaesthetists approaching the Final FRCA examination.

Volume one of this two-volume series covered the physiology, pharmacology and statistics as appropriate to the basic science part of the FRCA Primary examination. Volume two covers the remaining parts of the syllabus: physics, measurement, safety, and clinical anaesthesia. The book provides the examination candidate with a comprehensive collection of over 200 commonly asked viva questions in these key

areas as well as model short answers, supported with clear line diagrams where necessary.

Oxford Cases in Medicine and Surgery, second edition, teaches students a logical step-by-step diagnostic approach to common patient presentations. This approach mirrors that used by successful clinicians on the wards, challenging students with questions at each stage of a case (history-taking, examination, investigation, management). In tackling these questions, students understand how to critically analyse information and learn to integrate their existing knowledge to a real-life scenario from start to finish. Each chapter focuses on a common presenting symptom (e.g. chest pain). By starting with a symptom, mirroring real life settings, students learn to draw on their knowledge of different physiological systems - for example, cardiology, respiratory, gastroenterology - at the same time. All the major presenting symptoms in general medicine and surgery are covered, together with a broad range of pathologies. This book is an essential resource for all medicine students, and provides a modern, well-rounded introduction to life on the wards. Ideal for those starting out in clinical medicine and an ideal refresher for those revising for OSCEs and finals.

In recent years the basic science viva of the Final FRCA has evolved a more clinical perspective. The new edition of the highly successful Anaesthesia Science Viva Book incorporates this new clinical emphasis, giving candidates an insight into the way the viva works, offering general guidance on exam technique, and providing readily accessible information relating to a wide range of potential questions. Questions are divided broadly into the four areas covered by the exam: applied anatomy, physiology, pharmacology and clinical measurement. Answers have been constructed to provide candidates with more than enough detail to pass the viva. Covering the full scope of the basic science syllabus, and written by an experienced FRCA examiner, The Anaesthesia Science Viva Book, second edition, is an essential purchase for every Final FRCA candidate.
